

How to use PhycoTerra® in your garden

PhycoTerra®

PhycoTerra® uses the power of microalgae to feed and awaken the dormant beneficial microbes in your garden so they can go to work promoting soil health to help your vegetables, flowers, shrubs and trees thrive. PhycoTerra® is easy to apply, and can be used on all plants and all soil types.

ANNUAL APPLICATION RATES

When should I apply?

At seeding or transplanting.

Planting bed width (inches)	Oz of PhycoTerra® to add per gal of water	Amount (oz) of diluted PhycoTerra® to apply to seed or transplant line		
		Per 10 linear bed feet	Per 20 linear bed feet	Per 50 linear bed feet
24 in.	32 oz	4 oz	8 oz	16 oz
36 in.	16 oz	4 oz	8 oz	16 oz
48 in.	8 oz	4 oz	8 oz	16 oz

PERENNIAL APPLICATION RATES

When should I apply?

Spring leaf emergence, early summer and early fall.

Perennials

Apply PhycoTerra® at 1-2 oz per gallon of water near base of plant until soaked.

Trees

Apply PhycoTerra® at 1-2 oz per gallon of water at and around base of tree until soaked.

PRO TIPS!

ALWAYS AGITATE! Shake bottle side to side and back and forth vigorously for 15 seconds. This will help release sediment build up at bottom of bottle.

If applying to two seed lines per bed, apply at the same rate to the second seed line.

Application Method: Spay or use watering can to apply as band into seeding furrow prior to or after seed placement. Irrigate within 24 hours.
