How to use PhycoTerra® Organic in your garden or lawn

PhycoTerra® Organic

PhycoTerra® Organic uses the power of microalgae to feed and awaken the dormant beneficial microbes in your garden so they can go to work promoting soil health to help your vegetables, flowers, shrubs and trees thrive. PhycoTerra® Organic is easy to apply, and can be used on all plants and all soil types.

RATES FOR VEGETABLE OR ROW GARDENS

Amount (oz) of diluted PhycoTerra® Organic to apply to seed or transplant line			
Oz of PhycoTerra® Organic to add per gallon of water	Per 10 linear bed feet	Per 20 linear bed feet	Per 50 linear bed feet
4 oz	1 qt	0.5 gal	1.25 gal

Application Methods: Use watering can or hose-end applicator.

ANNUAL APPLICATION RATE

For Vegetable or Row Gardens: Apply by following the rates shown above at planting and then apply again every 4-8 weeks though the season.

For Individual Garden Plants (or Potted Plants): Apply at 4 oz PhycoTerra® Organic per gallon of water at planting and then apply again every 4-8 weeks through the season.

LAWN APPLICATION

2-4 oz / 1000 sq ft. every 4-8 weeks.

PERENNIAL APPLICATION RATE

When should I apply? Spring leaf emergence, early summer and early fall.

Perennials: Apply PhycoTerra® Organic at 4 oz per gallon of water near base of plant until soaked.

Trees: Apply PhycoTerra® Organic at 4 oz per gallon of water at and around base of tree until soaked.

PRO TIP!

ALWAYS AGITATE! Shake bottle side to side and back and forth vigorously for 15 seconds. This will help release sediment build-up at bottom of bottle.
